ABOUT ME

István, HARASZTI

- **Head of Quality – thyssenkrupp Springs and Stabilizers Hungary Kft.**
5 years, 13 years of automotive experience
- **Professional background – multinational companies:**
thyssenkrupp, Schaeffler, General Electric
- **Certified VDA 6.3 and IATF 16949 Internal Auditor**
- **Six Sigma Black Belt Trainer by PACCAR – DAF**

ABOUT THE COMPANY

thyssenkrupp Springs and Stabilizers Hungary Kft.

- Automotive supplier company, Debrecen
- Product: stabilizer bar, spring
- 350 employees, €50M annual revenue, 2.6M products
- Main customers: VW Group, JLR, BMW, Daimler, Stellantis, VOLVO

Introduction – Why Now Is the Right Time

- OEM expectations are tightening (IATF 16949, VDA 6.3)
- Production volume is increasing, error tolerance is decreasing to a minimum
- Challenges:
 - Manual audits are time-consuming
 - Multi-shift complexity
 - Late detection of errors
 - Difficulties in meeting audit requirements

AUDITS SHOULD BECOME PREDICTIVE AND VALUE-CREATING WITH AI SUPPORT

BEFORE AI – PAIN POINTS

**PAPER AND EXCEL AUDITS →
HIGH ADMINISTRATIVE BURDEN**

**FOLLOW-UP ACTIONS DELAYED
OR NEVER EXECUTED**

**IMPOSSIBLE TO IDENTIFY TRENDS AND
CORRELATIONS BETWEEN SHIFTS**

**REACTIVE QUALITY MANAGEMENT:
ISSUES DISCOVERED ONLY AFTER SCRAP
OR CUSTOMER COMPLAINTS**

REAL EXAMPLE: RUNNING THE TIRE INSPECTION SENSOR IN REDUCED MODE

THE SHIFT – INTELLIGENT AUDITING

- **Digitalization of audit processes → data collection via tablets / mobile devices**
- **Root Cause: Machine Learning → uncovering patterns and hidden correlations for maintenance / engineering**
- **Real-time dashboard → immediate visibility for managers and engineers**
- **Automatic action assignment, status tracking → no lost tasks**
- **Cross-line benchmarking, fast root cause analysis support during daily meetings**

TANGIBLE RESULTS

25–40% time savings in audit preparation and reporting

30%+ improvement in action closure rate

**Earlier error detection
→ reduced scrap rate and customer complaints**

**Auditors' time freed up
→ less administration
more value-adding tasks**

Efficiency: LPA responsible focuses on data analysis with AI instead of “just performing audits”

Best practice: cross-plant experience sharing, factory visits, and good practice exchange

WHAT DOES THIS MEAN FOR THE FUTURE?

- **AI becomes part of the quality culture at the Debrecen plant**
- **Data is integrated, not siloed → transparency across shifts**
- **Audit → from compliance to a Continuous Improvement driver**
- **Standardized best practices → scalable to other thyssenkrupp sites**
- **Stronger compliance with strict OEM and customer requirements**
- **Opportunity to involve the supplier network in AI-based auditing**

LESSONS LEARNED AND NEXT STEPS

The shift required a cultural mindset change as well, not only technology

AI → Predictive Quality

New audit types: process audit, product audit

We are better prepared for tightening OEM requirements and internal KPIs

NEXT STEP: SUPPLIER QUALITY MANAGEMENT WITH AI SUPPORT, PRODUCT AUDIT, CROSS-SITE ROLLOUT

THE FUTURE OF QUALITY: INTELLIGENT AUDIT

**AI-BASED AUDITING IN
DEBRECEN HAS CREATED A
NEW QUALITY STANDARD**

**NOT JUST EFFICIENCY, BUT
PROACTIVE ERROR
PREVENTION AND
CONTINUOUS
IMPROVEMENT**

**THIS APPROACH
CONTRIBUTES TO
THYSSENKRUPP'S AND THE
HUNGARIAN AUTOMOTIVE
INDUSTRY'S
COMPETITIVENESS**

**IN THE FUTURE, AUDITING
WILL NO LONGER BE
PAPERWORK, BUT
INTELLIGENT VALUE
CREATION**

THANK YOU
FOR YOUR ATTENTION!
